AST ASIA INSTITUTE OF MANAGEMENT

Moving forward

Jaslyn Itwe, 26, says a degree in medical bioscience will advance her career in the pharmaceutical industry.

Why did you decide to pursue your course of study?
After working in the pharmaceutical industry for a few years, I was looking for a suitable degree course to upgrade my skills to match the current needs of the industry. Getting aligned with the latest industry demands and building a strong scientific foundation are what I need for my career advancement. I believe that is an important factor for competitive employability.

How do you expect your degree to benefit your career?
After obtaining my degree, I believe more career opportunities will come my way. The skills and qualities that I am developing during my course of study will enhance my resume, making me stand out in a highly competitive graduate employment job market.

What are your teachers like?
EASB lecturers are experienced professionals who are very helpful. They will organize extra one-to-one sessions with us if we need help. Small class sizes also help the teachers bond and communicate better with students.

Tell us about campus life at EASB.
It is a student-friendly campus with facilities such as a library, study areas, cafeteria, auditorium, gym and basketball court. There are also many activity clubs for students to develop social and life-skills.

How does the course structure help you balance study and work commitments?
This is a part-time degree course, with classes being held on weekdays after office hours. This lets me spend time with my family or revise my work on week ends. With the timetable released in advance before each term, I am also able to plan my activities.
